<Internals\Abbott 1999> - § 1 reference coded [0.51% Coverage]

Reference 1 - 0.51% Coverage

The JGCP blueprint is one framework by which practices supported by "trustworthy" educational research can be brought to the attention of teachers based on their immediate needs ("accessible") and be rapidly implemented ("usable").

<Internals\Akerlund> - § 1 reference coded [0.39% Coverage]

Reference 1 - 0.39% Coverage

The program can be changed or modified to meet changing community needs or the program can come back in a different form.

<Internals\Anderson, D. et al. (2002)> - § 1 reference coded [0.88% Coverage]

Reference 1 - 0.88% Coverage

Assessment of the community's ``felt needs" helps to establish trust between the CHN and the community (Gonzalez et al., 1991) and is the ?rst step in establishing community ownership of the program. Once assets and needs are identi?ed by the community members then planning can begin.

<Internals\Arcury et al.> - § 1 reference coded [0.98% Coverage]

Reference 1 - 0.98% Coverage

The most powerful aspect of community participation in health intervention projects is that it forces the projects to address the health concerns of community members rather than the concerns of health professionals.[4] Additionally, participation encourages the involvement of community members as project participants and increases their willing- ness to provide detailed and accurate information. Finally, community participation in health projects results in capacity building and empowerment for the individuals who par- ticipate and the community as a whole.[5-7]
